Resolve For W32 Anig Crack+ Keygen

What's New in the?

ANIGCLI is a standalone Windows disinfectant that uses the Windows command line. It can be used to remove and/or modify any registry keys that a virus has modified. The name of the virus is shown in the command line output. To use it you have to do the following: 1. Open ANIGCLI.com file from your desktop after downloading it. 2. Click on the start command button. 3. Accept the default installation path or specify a different path. 4. Click on the OK button. 5. Wait for the process to complete. ANIGCLI will remove the virus and then reboot the computer in order to remove the rootkit. If you find any other viruses on your system, you can use ANIGCLI to remove them as well. You can also use ANIGCLI to remove a malicious DLL file called GinaDLL.DLL that is used by the virus to run. Usage: 1. Click on the start command button. 2. Enter the following command line (replace the values with the name of the file, path and the extension of the file that you want to disinfect): ANIGCLI [ENTER] [/D newdirectory] [/U userid] [/P password] [file-name] 3. You can enter one or more values for the following parameters: /U userid : The username that you want to use to run the command. /P password : The password for the user account. [/D newdirectory] : Specifies the new path to the directory where the virus is located. If you enter a directory name with spaces, you need to surround the name with quotation marks (double quotation marks in DOS and single quotation marks in UNIX). Example: 1. To disinfect the file W32/Anig-A in the current folder, you can enter the following command: ANIGCLI /D "C:\Windows\system32" /U "administrator" /P "password" "W32/Anig-A.exe" 2. You can accept the default installation directory of ANIGCLI. 3. Enter the following command to view the command line output and the results of the disinfection: ANIGCLI /H 4. You can end ANIGCLI. 5. To exit from ANIGCLI, press the CTRL-C key. Additional Notes: 1. The command line ANIGCLI will remove the virus and then reboot the computer. ʏ
