JetBrains DotPeek Torrent For PC

Easily manage assembly lists Quick code identification Explore and decompile running processes Usage: Navigate the system assemblies (Visual Studio, Windows,.Net Framework etc.) to find the assemblies you want to decompile Load any DLL, EXE, NUPKG, VSIX, etc. Find the decompiled files within a list of assemblies Navigate to the files in the decompiled list with ease Save the list and load it later on View the decompiled code of the files of your choice Highlight your code to get an immediate view of the syntax and declarations The decompiler also ships with many built-in color schemes Windows: Mac OS X: 1) Select an assembly 2) Choose the assembly to decompile from the Assembly list window 3) Choose the process to decompile from the Process list window 4) Open the program to launch dotPeek 5) Use the navigation tools to browse through the decompiled code 6) Save the decompiled code into a list or the clipboard 7) Use the navigation tools to browse through the decompiled code User Review Related Links No related links were found for this application. Screenshots About dotPeek dotPeek is a free and easy-to-use decompiler for .NET assemblies. It is based on Intel® Pin® technology, which is a popular and very powerful tool for analyzing .NET assembly files. The application offers several advanced features that make dotPeek a useful tool for both developers and system admins. Some of its key features include: • High-level decompiler with an easy-to-use user interface; • Simplified reverse engineering; • Support for decompiling and analyzing managed and unmanaged code; • Support for decompiling executable files; • Support for all types of PDB files, including .NET 4.0 PDB files; • Support for decompiling multiple processes at once; • Detailed assembly navigator; • New assembly browser and file manager; • Support for incremental decompiling; • Support for debugging and exploring .NET source code; • Automatic symbol and offset navigation; • Support for LINQ-to-SQL and SQL-to-LINQ; • Support for smart code navigation; • Support for C#-to-VB conversion; • Support for advanced search; • Memory snapshots and different memory

What's New In JetBrains DotPeek?

A decompiler for dotPeek functionality. It was previously available for MacOS only, it now supports Windows too. Installation: Extract the downloaded file to your desired directory. Once done, run the .exe file. Programming does not all go down to writing a few lines of code in order to build the desired application. Nowadays, structures are built with various tools that are either easier to use or provide more flexibility. When it comes to coding, JetBrains dotPeek aims to provide a user friendly environment for decompiling .NET assemblies to C# code. Easily manage assembly lists The main interface is pleasant enough and makes developers feel at home. An assembly explorer window is available by default so you can quickly browse through .NET assemblies found in system.core, system.web, system.xml and a few other places. The list can be managed with ease. You are able to load files of your choice which can be DLL, EXE, NUPKG, VSIX, explore the whole content of a folder, or open a different assembly list. In addition, you can save any changes you make to a custom list for later processing. Quick code identification With a few clicks you gain access to the decompiled code to analyze. Syntax highlighting makes it easier to identify declarations and symbols for which you can choose to find a usage. What's more, the application comes equipped with a decent palette of navigation tools to easily move around. You can choose to go to declaration, implementation, symbol, assembly and even advanced search criteria. Explore and decompile running processes Furthermore, the application puts a process explorer at your disposal in order to explore their modules if you need decompiling, in case they happen to be .NET assemblies. For enhanced accessibility, you can also have native processes displayed, or CLR hierarchies. In conclusion Taking everything into consideration, we can say that JetBrains dotPeek lives up to expectations, providing a suitable means of decompiling .NET assemblies. It takes little accommodation and the tools it comes equipped with allow for fast navigation and identification of files and declaration usage. Description: A decompiler for dotPeek functionality.
